

第一章作业 答案

T1. Choose the only one correct answer for each question below

1. In the digital computer system, (C) can be used to convert subtraction into addition.
(A) sign-magnitude (B) ASCII code (C) complement code (D) BCD code
2. The “5421” BCD code 1011 is equivalent to the decimal number (B).
A. $(11)_{10}$ B. $(8)_{10}$ C. $(4)_{10}$ D. $(5)_{10}$
3. The Signed Magnitude representation of the binary number $(+1001)_2$ is (C).
A. $(00110)_{SM}$ B. $(11001)_{SM}$ C. $(01001)_{SM}$ D. $(1001)_{SM}$
4. (D) is not an odd parity code for binary number.
A. 1011 B. 1101 C. 1000 D. 1100
5. (C) is not an even parity code for binary number.
A. 1111 B. 1001 C. 0010 D. 1010

T2. Write your answers in the blanks

1. Suppose $[X]_{TC}=0.1010$, $[-Y]_{TC}=1.1101$, then $X+Y=$ $+0.1101$ °.

$$[-y]_{SM} = 1.0011, -y = -0.0011, \quad \text{or} \quad -y = -1 + 0.1101 = -0.0011$$

$$y = 0.0011$$

2. The binary number $(10001111)_2$ is equivalent to the hexadecimal number ($8F$)₁₆.

T3. True or False Questions. Please write your answer as “T” or “F” in the parentheses .

1. The hexadecimal number $(C)_{16}$ is equivalent to the decimal number $(13)_{10}$. (F)
